DOCUMENT RESUME

ED 258 797 SE 045 792

TITLE	Mathematics: Computation/Applications. Eighth/Twelfth Grade. Wisconsin Pupil Assessment Program.
INSTITUTION	Wisconsin State Dept. of Public Instruction, Madison. Div. for Management and Planning Services.
REPORT NO	WSDPI-Bull-2226
PUB DATE	[81]
NOTE	34p.
PUB TYPE	Tests/Evaluation Instruments (160)
EDRS PRICE	MF01/PC02 Plus Postage.
DESCRIPTORS	*Computation; *Educational Assessment; Grade 8; Grade 12; *Mathematical Applications; *Mathematics Achievement; Mathematics Education; *Quantitative Tests; Secondary Education; *Secondary School Mathematics; State Programs; Testing Programs
IDENTIFIERS	*Wisconsin Pupil Assessment Program

ABSTRACT

This booklet contains the mathematics test (computation and applications) for the Wisconsin Pupil Assessment Program for grades 8 and 12. The test consists of 99 items which range from measuring arithmetical skills to skills in computer programming. (JN)

Total charges may be less than the sum of the initial minute(s) plus additional minutes charges

87. If the caller takes advantage of the Evening Discount, how much would it cost to call Rhinelander and talk for 5 minutes?

A $ .82

B $1.10

C $1.17

D $1.39

88. How much would it cost to call Portage and talk for one minute on a Saturday night?

A $ .07

B $ .10

C $ .17

D $ .27

89. Computers are <u>not</u> good for tasks that require:

A speed.

B accuracy.

C intuition.

D something to be done over and over again.

90. When in operation, a computer:

A follows a set of instructions written by people.

B thinks just like a person.

C recalls answers from memory.

D translates data from digital to analog code.

91. Computers <u>cannot</u> run without:

A blinking lights.

B keyboards.

C instructions.

D all of the above.

92. In order to program a computer, a person:

A can use any English language words.

B can use any English or foreign language words.

C must use programming language numbers, not words.

D must use the words from a programming language.

93. At any given moment, a computer's memory unit can store:

A programs.

B data.

C answers.

D all of the above.

94. The computer must have two types of information to solve a problem:

A the problem and the answer.

B the name of the program and user number.

C the data and the instructions.

D the name of the program and your name.

95.

Choose the correct output for the procedure described below:

1. List the three names Brown, Anderson and Crane in alphabetical order.
2. Remove the last name from the list.
3. If only one name is left, stop. Otherwise, go on to step 4.
4. List the remaining names in reverse order.
5. Go back to step 2.

Output

A Anderson, Brown, Crane

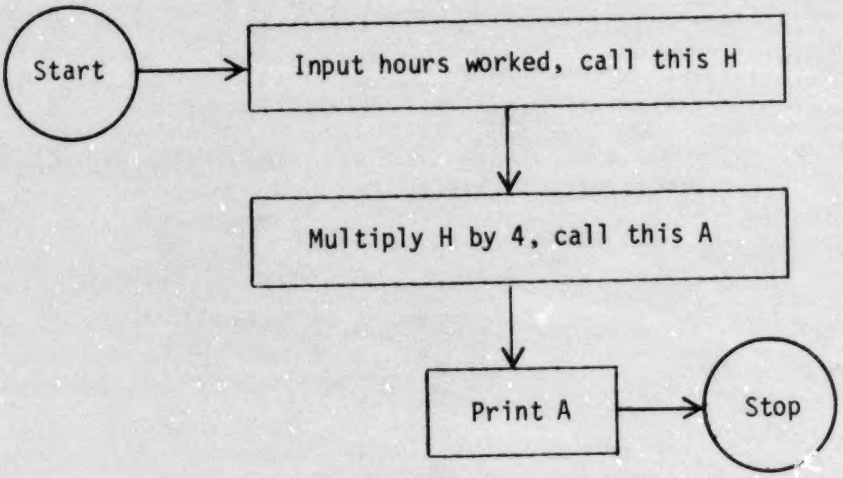
B Brown

C Anderson, Brown

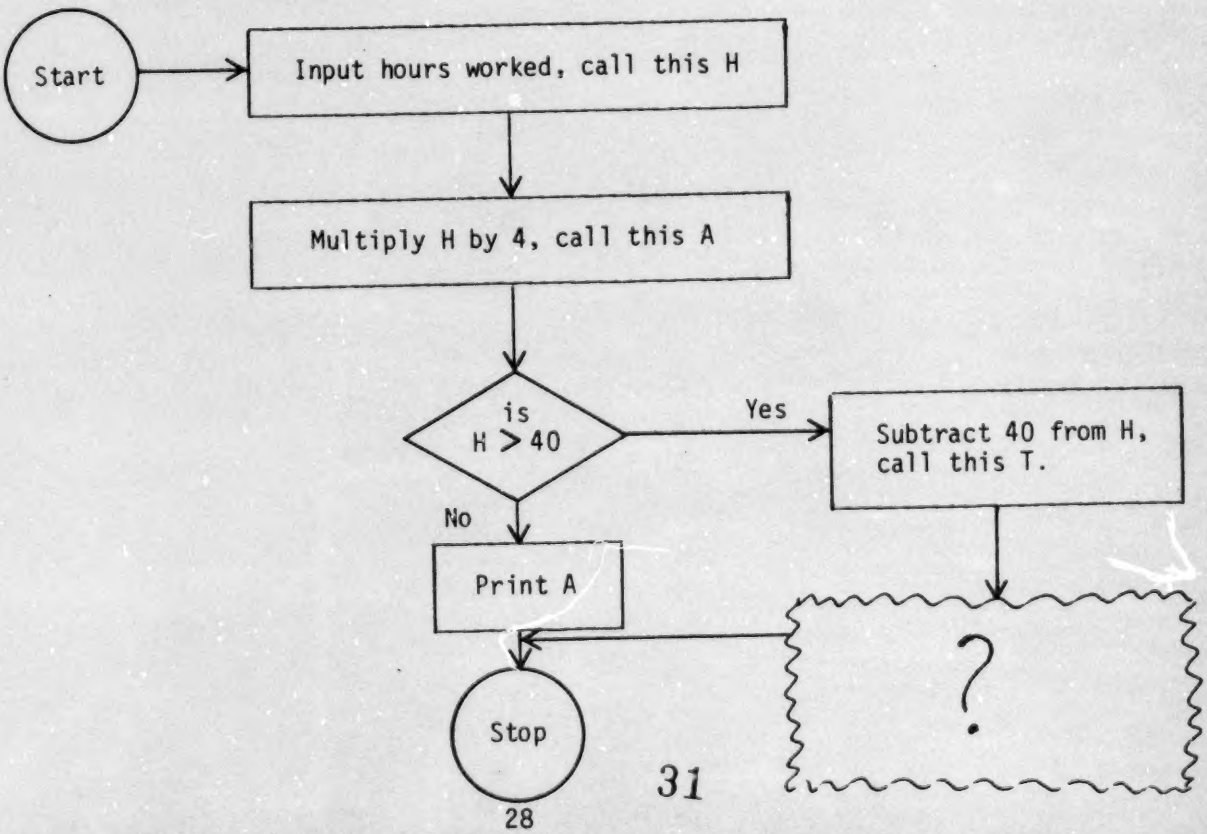
D Anderson

96.

An algorithm (flowchart) to determine the weekly wages of employees in a bakery is shown below. Employees are paid $4 per hour up to 40 hours per week.



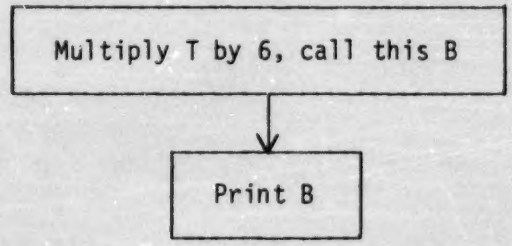
Employees are also paid "time-and-a-half" ($6 per hour) for overtime (hours worked over 40). How would you extend the flowchart below to include overtime pay?



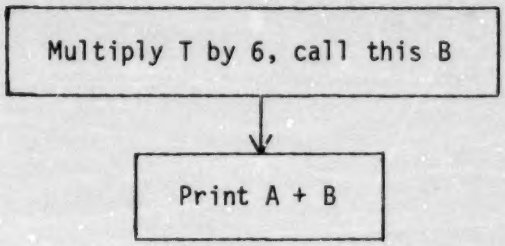
96. continued

Select one of the following to include overtime pay on the flowchart.

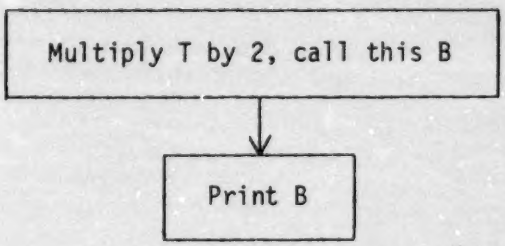
A



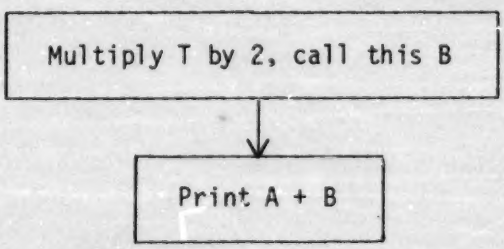
B



C



D



DIRECTIONS: If you have never written a computer program, STOP: do NOT answer items 97-99 below. Answer items 97-99 only if you have written a computer program before.

97.

Choose the correct output for the computer program shown below:

```
1     LET A = 3
2     LET B = 4
3     LET C = A
4     LET B = C
5     LET A = B
6     PRINT A,B
7     END
```

Output

A 3 4

B 4 3

C 3 3

D 4 4

98.

When run on a computer, the following program will:

```
1     INPUT A, B, C, D, E
2     LET S = A+B+C+D+E
3     LET M = S/5
4     PRINT S,M
5     END
```

A Calculate the sum of five input values.

B Calculate the average of five input values.

C Print the sum and average of five input values.

D All of the above.

99.

This program instructs the computer to count by two.

```
10    LET M = 0
20    LET M = M + 2
30    PRINT M
40    IF M < 100 THEN 20
50    END
```

Which change will produce a program which can be used to count by A? (For example, A = 3, 6, or 8.)

A
```
5 READ A
7 DATA 3, 5, 8
```

B
```
5 LET M = A
30 PRINT A
```

C
```
5 INPUT A
20 LET M = M + A
```

D
```
5 LET X = A
20 LET M = X + A
```
